

Visual Space Intelligence – VEGA Teaching Scenario

**Topic:** To understand geometric representation and volume consideration. Solving problems related to open-ended situations and mathematical investigations and small project work on measurements using different strategies

Subject(s): Maths

Age / Grade: 11+ / grade 5+

Short description of the game in this scenario:

<u>Cubism</u> Challenge your mind in Cubism, a deceptively simple VR puzzle game where you assemble increasingly complex shapes out of colourful blocks.

Immerse yourself in a Zen environment as you reason your way through 60 puzzles which will put your spatial thinking skills to the test.

A beautiful game with a minimalist look. With a very well designed learning curve and excellent mechanics for virtual reality. It is not like Tetris or similar, it is more like children's wooden games. The

progressive difficulty is very well managed and the piano chords help in the concentration. A fun game perfect to start in virtual reality.

#### Introduction to the scenario

The main objective of the stage is to work on the concepts of volume and geometry with the students. In a manual way, create cubes, calculate the volume and later calculate more complex volumes using cubes as a base.

Several sessions will be worked with the students to be able to complete different activities that allow the learning of the concepts.

#### Learning outcomes:

- To apply knowledge and skills related to rectangular and square arrays
- To decide the theme/context related to your array world
- To initially define the area and perimeter of at least 30 locations/landmarks in your world
- To discover the volume of the locations you have built by developing your own formula
- To follow a provided timeline in order to complete each component of your project
- To present your Minecraft World
- To work in a collaborative manner with your teammates

The students are able to:

- Students will be able to write and interpret numerical expressions.
- Students will recognize volume as an attribute of three-dimensional space.
- Improve visual perception for 3D figures
- Learn about Volume calculation
- Learn about Scale calculation
- Learn about calculation of the volume of COMPLEX figures based on Cubes
- Identify 3D figures from 2D views
- Understand scales and measurement differences
- Divide a complex volume into basic geometries

Students will understand:

- Volume concept
- Spacial Perception
- Geometric Perspective

### A selection of learning outcomes from the Spanish Curriculum

Mathematics is a body of knowledge that enables us to understand and structure reality, analyse it and obtain information to evaluate it and make decisions; it is necessary in everyday life in order to learn how to learn, and also for what its learning contributes to general intellectual training and cognitive development. The use of mathematical tools makes it possible to tackle a wide variety of situations identified with deduction, induction, estimation, approximation, probability, precision, rigour, security, etc., in such a way that they involve not only using quantities and geometric shapes but, above all, finding patterns, regularities and mathematical laws whose fundamental usefulness is to help us understand the world around us (Decree 108/2018).

The curricular adaptation of the scenario has been done from the teacher's perspective. That is to say, the contents, assessment criteria and competences have been postulated as they would be in a classroom didactic programme.

The contents block corresponds to MEASUREMENT. This block also encompasses two conceptual categories: identification and use of measuring instruments. This block deals with the application of different instruments and units to carry out measurements, progressively increasing in difficulty.

This scenario is part of the curriculum for the 6th of Primary School. The contents of 5th grade Primary School to be applied in this scenario are as follows of the MEASUREMENT block:

- Solving problems related to open-ended situations and mathematical investigations and small project work on measurements using different strategies, collaborating with others Units of the Decimal Metric System (length, weight/mass, capacity, surface area) and equivalences.
- Recognition and interpretation of simple numerical texts from everyday life related to measurements and their magnitudes. Representation of events and periods at different time scales on a number line.

- For these contents, the corresponding assessment criteria are as follows. Select instruments and units of measurement to solve open situations and mathematical investigations and small work projects on measurements in different environments (natural, artistic, architectural, etc.).
- The competences acquired are measured in indicators of achievement which are as follows for these contents. These performance indicators are directly related to social and civic competences, mathematical competence and basic competences in science and technology mathematical competence, basic competences in science and technology and sense of initiative and entrepreneurship.
- Uses non-conventional (sticks, steps, tiles) and conventional measuring instruments (graduated ruler, weight scales, needle clock, calendar...) and units (kilogram, metre, day and hour) to make measurements of different magnitudes (length, weight/mass and time) of objects and spaces in their immediate environment (classroom and home).
- Uses non-conventional (sticks, steps, tiles, ropes, sticks, cans, bottles) and conventional measuring instruments (tape measure, graduated ruler, weight scales, graduated glasses, calendar, hand clock...) and units (kilogram, metre, metre, day and time).) and the units (kilogram, metre, centimetre, litre, day, week, month, year and hour) that best fit in each case to make measurements of different magnitudes (length, weight/mass, capacity and time) of objects and spaces in their immediate environment (classroom and home).
- Identifies appropriate measuring instruments (stopwatch, ruler, metre, tape measure, analogue clock, digital clock, balance, weighing scale, measuring cylinder, flask), to make measurements of different magnitudes (length, weight/mass, capacity and time) in their immediate environment (classroom and playground).
- Identifies and selects measuring instruments (stopwatch, ruler, metre, tape measure, analogue clock, digital clock, balance, weighing scale, measuring cylinder, flask), to accurately measure different magnitudes (length, surface, weight/mass, capacity and time) in real environments (market, street, competitions...).
- Identifies and selects measuring instruments (stopwatch, ruler, metre, tape measure, analogue clock, digital clock, balance, weighing scales, measuring cylinder, flask), in order to carry out with accuracy and precision measurements of different magnitudes (length, surface, weight/mass, capacity and time) in real environments (market, street, competitions...).
- Selects instruments and units of measurement to solve open situations and mathematical investigations and small work projects on measurements in different environments (natural, artistic, architectural...).

The contents of the **GEOMETRY block** :

- The number  $\pi$  .
- The area of the circle.
- Calculation of the area and perimeter of regular polygons.
- Calculation of the perimeter and area of plane figures and their of plane figures and compositions of them.

The assessment criterion that corresponds to the content is as follows.Calculate area and perimeter of any plane figure in environments (natural, artistic and architectural, etc.), using different strategies (formulas, formulas, decomposition, etc.) to explain the world around us.

The competences worked on are social and civic competences, mathematical competence and basic competences in science and technology. The corresponding indicators of achievement.

- Calculate the perimeter of regular and irregular polygons (i.e. triangle, quadrilateral, pentagon, hexagon, heptagon, heptagon and octagon) found in a drawing, in the classroom or in the playground, expressing the result in cm. expressing the result in cm. or m.
- Calculate the area of rectangles and triangles constructed onraster, graph paper, geo-plane, etc., expressing the result in non-conventional units.
- Discover the formulas for the area of the square, rectangle parallelogram and the triangle built on square frames on square frames to use them in other situations other area calculation situations, expressing the result in non-conventional units conventional units
- Calculate the area and perimeter of any plane figure, using conventional units, in environments(natural, artistic and architectural, etc.), using different strategies (formulas, formulas, decomposition, etc.) to explain the world around us.

# **Students self-assessment rubric**

This rubric is made to help understand what's important with games or any new media in general. An experienced teacher can run without, but this is to help new teachers to assess what's valuable.

The idea is that every ROW is just ONE variable (ex. recall, transfer. problem-solving etc.). You read the first column and give a 'grade'. The descriptions are just there to give a 'quality' if you need that.

|                      | Student evaluation rubric   |   |  |   |  |  |  |  |  |  |
|----------------------|---|---|--|---|--|--|--|--|--|--|
| Knowledge<br>content | 1   | 2   | 3  | 4   |  |  |  |  |  |  |
| Information recall   | Student can't recall information covered in game  | Student can recall some information covered in game                           | Student can recall most information covered in game                                    | Student can recall all the information from the game well                                 |  |  |  |  |  |  |
| Transfer             | Student can't connect the<br>information in game to<br>information on books or in other<br>medias | Student can transfer some information from the game to other medias           | Student can transfer majority<br>of information from the game<br>to other medias       | Student can connect the information in game very well to contents in other medias         |  |  |  |  |  |  |
| Skills               | 1   | 2   | 3  | 4   |  |  |  |  |  |  |
| Problem-solving      | Student did not try to solve problems in game / during activity                                   | Student was somewhat active<br>in solving problems during the<br>activity     | Student worked rather actively on solving problems during class.                       | Student worked very actively on solving problems during class                             |  |  |  |  |  |  |
| Collaboration        | Student was not able / willing to collaborate with others.  | Student participated, but was<br>not particularly active in<br>collaboration. | Student was actively collaborating while working.                                      | Student was very actively collaborating while working.                                    |  |  |  |  |  |  |
| Creativity           | Student did not actively<br>consider / provide creative<br>solutions to tasks or challenges       | Student provided some<br>creative ideas and solutions<br>during the activity  | Student actively considered /<br>provided creative solutions to<br>tasks or challenges | Student very actively<br>considered/provided creative solutions<br>to tasks or challenges |  |  |  |  |  |  |
|                      | 1   | 2   | 3  | 4   |  |  |  |  |  |  |

| Exercise completion | Student was not able to complete the tasks in the game | Student was able to complete some of the tasks in the game | Student was able to complete most of the tasks in the game | Student was able to complete all (or nearly all) tasks in the game |
|---------------------|--|--|--|--|
| Engagement          | Student was not engaged during the class               | Student was slightly engaged during the class              | Student was engaged during the class                       | Student was very engaged during the class                          |

# **Formative assessment**

Number of students: Duration (estimated time/number of lessons):

- 20 students (2 students/group)
- 2 lessons á 45 min

Prerequisites (necessary materials and online resources):

- Oculus Quest
- Check that the internet is working
- Game Cubism
- Information about the topic to mediate to the students (videos, pictures, Educational tools etc.)
- Printed version of PDF 2D VIEWS OF THE GEOMETRIC FIGURES (FROM CUBISM)

#### Before the program begins (preparatory work for teacher):

• Watch the videos:

### CUBISM TRAILER

# https://www.youtube.com/watch?v=UJo398d-K2I HANDTRACKING UPDATE

https://www.youtube.com/watch?v=D8ufYPkKK6E

# VIRTUAL TRAIN TEASER

https://www.youtube.com/watch?v=YM9Ll2j44RQ

- Prepare and collect all things needed for the scenario
- Learn how basic functions work and how you use the controllers (make a manual for the controllers if the students haven't used them before)
- Create an assignment in Google classroom with project description and goals (the same task for two lessons)

All material the students need is included in the assignment

• Divide students into groups of maximum two students.

The main part of the scenario (number of lessons):

Part one (Two lessons day 2 x 45min)

### Lesson 1

In classroom teacher need to introduce concepts VOLUME, GEOMETRY, AREA, CALCULATION

https://www.youtube.com/watch?v=jgpwhYLm6uo

https://www.khanacademy.org/math/cc-fifth-grade-math/5th-volume/volume-with-unit-cubes/v/how-we-measure-volume

The teacher must introduce students to the mathematical concepts of volume, units of measurement and volumetric visualisation of 3D figures using Infographic and PDF

It presents the difficulty of calculating volumes that are not basic geometric figures.

# DOWNLOADING DICE PDF

https://www.childreninthewilderness.com/wp-content/uploads/2017/09/Dice-Template.pdf

The class could be divided into groups (reinforcement of teamwork) and build, using dice, their own small cubes that fit inside a large cube. And in order to carry out this activity, they must put into practice the knowledge they have learned and find the volume of the large cube, to know how large they have to build it.

From here you can develop numerous games, for example, make teams and one team will have to guess the volume of the large cube, of the other team, knowing the volume of the small cubes and vice versa.

Through the game they will be able to practice not only geometry, but metric units (for the opposing team to calculate the volume of another cube you can play to say different metric units), decomposition of numbers into prime factors (when knowing the volume of the large cube, they must find the volume or number of small cubes that fit inside), etc.

# Students should create infographics about:

- INFOGRAPHy FOR METRIC SCALES
- INFOGRAPHy FOR CALCULATING THE VOLUME OF A CUBE
- INFOGRAPHY EXPLAINING HOW TO CALCULATE COMPLEX VOLUME BASED ON CUBES.

The teacher presents the students volume of figure, and students need to calculate number of cubes and later draw 2D views of figures from the Cubism game.

The student and his team must solve the Cubism Quiz corresponding to each figure, count the total number of cubes that the figure has and calculate the volume based on the number of cubes.

Each student will Select diferent models from CUBISM GAME, they must complete Quiz and later:

- Determinate number of cubes
- Calculate volume
- Students need fo find what figure is searching for

They need to DRAW the 3 main view: FRONT, LATERAL AND TOP

# Summative assessment:

| Grades 5-10          | 5   | 6   | 7   | 8   | 9   | 10  |
|----------------------|---|---|---|---|---|---|
| Content application  | Have difficulty in<br>applying their<br>visual spatial<br>skills.<br>Show great<br>difficulty in relating<br>geometric models<br>to figures.<br>They do not apply<br>the knowledge of<br>the subject. | Have difficulty in<br>applying their<br>visual spatial<br>skills.<br>They relate<br>geometric models<br>to their<br>corresponding<br>figures, but it<br>takes too much<br>time.<br>They apply their<br>knowledge of the<br>subject: naming<br>the proposed<br>figures | Have some<br>difficulty in<br>applying their<br>visual spatial<br>skills.<br>Relate geometric<br>models with their<br>corresponding<br>figures in a<br>reasonable<br>amount of time.<br>They apply their<br>knowledge of the<br>subject: they<br>know how to<br>measure or name<br>the proposed<br>figures. | They apply their<br>visual spatial<br>skills.<br>They relate<br>geometric<br>models to their<br>corresponding<br>figures without<br>difficulty.<br>They apply their<br>knowledge of<br>the subject: they<br>know how to<br>measure or<br>name the<br>proposed<br>figures. | They apply their<br>spatial visual<br>skills<br>successfully.<br>Quickly relate<br>geometric<br>models to their<br>corresponding<br>figures.<br>They apply their<br>knowledge of<br>the subject:<br>they know how<br>to measure and<br>name the<br>proposed<br>figures. | They apply their<br>spatial visual skills<br>successfully.<br>Quickly relate<br>geometric models to<br>their corresponding<br>figures.<br>They apply their<br>knowledge of the<br>subject: they know<br>how to measure and<br>name the proposed<br>figures. |
| Exercise resolutions | There are more<br>than 5 geometric<br>model that do not<br>relate to your<br>figure   | Relate the<br>geometric model<br>to their respective<br>figures except for<br>5 or more.  | Relate the<br>geometric model<br>to their respective<br>figures except for<br>3 or 4.   | Relate the<br>geometric<br>model to their<br>respective<br>figures except 1<br>or 2.  | They choose all<br>the geometric<br>model with<br>their<br>corresponding<br>figures.  | They choose all the<br>geometric model<br>with their<br>corresponding<br>figures.   |

| Skills                  | No attitude<br>towards the<br>activity.<br>Distorts group<br>activity.   | Has a resolute<br>attitude.<br>Work on an<br>individual basis.<br>Does not show<br>motivation in the<br>activity.      | Has a resolute<br>and assertive<br>attitude.<br>Develops his/her<br>role in the group.<br>Work<br>cooperatively. | Shows<br>motivation in<br>the activity.<br>Has a resolute<br>and assertive<br>attitude.<br>Develops<br>his/her role in<br>the group. | Shows<br>motivation in<br>the activity.<br>Has a resolute<br>and assertive<br>attitude.<br>Develops<br>his/her role in<br>the group.<br>Works<br>creatively. | Shows motivation in<br>the activity.<br>Has a resolute and<br>assertive attitude.<br>Develops his/her<br>role in the group.<br>Works creatively. |
|-------------------------|--|--|--|--|--|--|
| Activity and engagement | The student has<br>had challenges to<br>get the task<br>finished. The<br>student hasn't<br>shown signs of<br>engagement<br>neither at school<br>nor at home. | The student has<br>only occasionally<br>shown interest in<br>the work and has<br>had difficulty<br>finding motivation. | The student has<br>mostly shown<br>interest in the<br>work both at<br>home and at<br>school.                     | The student has<br>shown interest<br>and<br>commitment to<br>the work both at<br>home and at<br>school.                              | The student<br>has shown<br>great interest<br>and<br>commitment<br>both in lessons<br>and at home.   | The student has<br>shown great<br>interest,<br>responsibility and<br>commitment both in<br>lessons and at<br>home.                               |

| The overall picture of the work when completed.           | The student<br>misses several<br>parts of his work<br>and several points<br>are not checked in<br>the list.  | The student lacks<br>several parts of<br>the checklist in his<br>work.  | The student lacks<br>certain parts of<br>the checklist, but<br>it is largely<br>complete.   | The student has<br>done all the<br>parts on the<br>checklist.   | The student<br>has done all the<br>parts on the<br>checklist and<br>you can see<br>that the student<br>has made an<br>effort to include<br>all the parts.   | The student has<br>done every single<br>part on the checklist<br>and it can be seen<br>that the student has<br>processed the<br>content.  |
|---|--|---|---|---|---|---|
| The mindmap: Text structure, spelling and layout of text. | The mind map<br>lacks important<br>parts and lacks<br>headings. The<br>student uses a<br>limited number of<br>words and the<br>variation is poor.<br>The student needs<br>a lot of support to<br>complete the task<br>in view of the<br>digital skills<br>required. The task<br>is full of spelling<br>and language<br>errors. | The student has<br>challenges with<br>the content in the<br>mindmap and<br>lacks headings.<br>The student uses<br>a limited number<br>of words and the<br>variation is not<br>great. The student<br>needs support to<br>complete the task<br>in view of the<br>digital skills<br>required. The task<br>is full of spelling<br>and language<br>errors. | The student's<br>mind map<br>includes the basic<br>things but lacks<br>some important<br>facts . In most<br>places, the<br>student has a<br>heading where<br>the task so<br>requires. The<br>student has<br>certain<br>shortcomings in<br>the digital skills<br>that the task<br>requires. The<br>student has<br>several places of<br>negligence and<br>not corrected<br>spelling errors. | The student's<br>mind map<br>includes the<br>most important<br>things. The<br>student uses<br>headings and<br>can reflect on<br>his word<br>choices. The<br>student has the<br>digital skills that<br>school work<br>requires, knows<br>the standards<br>for basic<br>spelling and the<br>structures of<br>written language<br>and can use<br>them in text<br>production. | The content of<br>the mind map is<br>complete. The<br>student has<br>creative<br>headings and<br>can reflect on<br>their word<br>choices in<br>many ways.<br>The student<br>has the digital<br>skills that the<br>task requires.<br>The student<br>knows the<br>norms of basic<br>spelling and the<br>structures of<br>written<br>language and<br>can use them in | The mind map has<br>all the content that is<br>requested and is<br>structured in a way<br>that shows that the<br>student masters the<br>subject. The text is<br>put together in a<br>versatile way. The<br>student uses a<br>versatile language<br>and varies his<br>words. The student<br>knows the norms of<br>basic spelling and<br>the structures of<br>written language<br>and can use them in<br>a versatile way in<br>text production. |

|   |  |  |  |  | a versatile way<br>in their mind<br>map.  |   |
|---|--|--|--|--|---|---|
| Images and captions   | The student lacks pictures.  | The student has few pictures and no captions.  | The student has<br>pictures but no<br>captions.  | The student has<br>pictures with<br>accompanying<br>text.  | The student<br>has several<br>pictures and<br>descriptive<br>captions.  | The student has<br>versatile pictures<br>and descriptive and<br>explanatory text.   |
| Showing responsibility for the<br>completion of the work.<br>Cooperation and peer<br>response | The student had<br>difficulty<br>cooperating with<br>his group and did<br>not listen to his<br>classmates.The<br>student did not<br>give a peer<br>response and did<br>not take into<br>account what the<br>group gave in<br>response. | The student had<br>some difficulties in<br>cooperating with<br>his group and<br>listening to his<br>classmates.
